Saebo Introduces Outpatient Evaluation Kit

Allows Patients to Work with Saebo devices prior to Purchase

Charlotte, NC - December 15th, 2008 – Saebo, Inc, a leading international provider of innovative stroke rehab products, has introduced an Evaluation and Fitting Kit for use by Outpatient therapy clinics. The Kit will enable patients to “test drive” a variety of the company’s stroke rehab products prior to making a purchase.

“While we have thousands of satisfied customers throughout the world, many of our therapists told us that they had patients who were appropriate for the Saebo Program, but were hesitant to make a purchase commitment without first trying the device in therapy,” stated Henry Hoffman, President of Saebo. “Conversely, in some cases, clinicians are not exactly sure if their patients are appropriate for the SaeboFlex or the SaeboReach. Based on that feedback, we developed the Outpatient Evaluation Kit, as an easy, affordable way our Saebo-Trained therapists can introduce our products to their patients and make appropriate recommendations.”

Another goal of the Outpatient Evaluation Kit is to allow hospitals and private clinics to offer free “Patient Screening” events in their local markets, where prospective patients can try the device to see if they are appropriate for Saebo therapy. Because the kit is so affordable to clinics, simply enrolling two or three new patients into therapy provides an attractive Return on Investment for the clinic.

“We have had a tremendous positive response to the introduction of this product,” Hoffman continued. “At a time when all therapy clinics are striving to increase their referral base and grow their practices, many are finding that offering Saebo products and programs gives them a significant competitive advantage in their local markets.”

About Saebo, Inc.

Saebo, Inc. is a global provider of innovative rehabilitation products for stroke survivors and other neurologically impaired individuals. Headquartered in Charlotte, NC, the company was founded in 2001 by two occupational therapists specializing in stroke rehabilitation. As the leading cause of long-term disability in the U.S., stroke affects over 700,000 Americans every year, leaving many with crippling side effects, including the loss of hand function. Saebo’s pioneering treatment protocols are based on new research documenting the brain’s remarkable ability to “re-program” itself following injury. The company’s neurological orthotic devices, including the ground-breaking *SaeboFlex* and *SaeboReach*, allow patients

with very little residual hand function to immediately begin grasping and releasing objects in high repetition exercises, thereby forging new pathways in the brain. Named *Most Valuable Product* in 2008 by *Therapy Times*, the *SaeboFlex* and *SaeboReach* are now offered as treatment options at over 1,500 clinics and hospitals nationwide, including 22 of the "Top 25 Rehabilitation Hospitals" as ranked by *U.S. News & World Report*. Most Saebo products are eligible for reimbursement by Medicare and most commercial insurers. With a network of over 3,400 trained clinicians spanning four continents, Saebo is committed to helping stroke survivors around the globe achieve a new level of independence.
