Largest Private Hospital in Saudi Arabia Expands Relationship with Saebo

Saad Specialist Hospital Acquires Outpatient Evaluation Kit

Charlotte, NC – March 23, 2009 – Saebo, Inc., a leading international provider of innovative stroke rehab products announced today that Saad Specialty Hospital has expanded its Saebo Rehab therapy program through the addition of Saebo's Outpatient Evaluation and Training Kit. The Kit will enable patients to try the Saebo products prior to committing to purchasing the device. It will also provide therapists with more confidence when determining if the program is clinically appropriate for their patients.

"In 2007, Saad physical and occupational therapists traveled to the United States to receive Level I and Level II Advanced Saebo training. Following the clinical training, Saad became the first hospital in the Gulf Region to offer the Saebo program," stated Henry Hoffman, Saebo's President. "The success they have achieved for their patients over the last couple years made the addition of the Outpatient Evaluation Kit a logical extension of their rehab program."

About Saad Specialist Hospital - With over 600 beds, Saad Specialist Hospital is the only private tertiary care hospital in Saudi Arabia, and one of the largest private hospital in the Gulf States Region. Built in 2002, its state of the art facilities, programs and technologies attract both clinicians and patients from around the world. Further, it is the only hospital in the Gulf Region that is accredited by the Joint Commission International, the Canadian Council on Health Services Accreditation and the Australian Council on Healthcare Standards.

About Saebo, Inc.

Saebo, Inc. is a global provider of innovative rehabilitation products for stroke survivors and other neurologically impaired individuals. Headquartered in Charlotte, NC, the company was founded in 2001 by two occupational therapists specializing in stroke rehabilitation. As the leading cause of long-term disability in the U.S., stroke affects over 700,000 Americans every year, leaving many with crippling side effects, including the loss of hand function. Saebo's pioneering treatment protocols are based on new research documenting the brain's remarkable ability to "re-program" itself following injury. The company's neurological orthotic devices, including the ground-breaking *SaeboFlex* and *SaeboReach*, allow patients with very little residual hand function to immediately begin grasping and releasing objects in high repetition exercises, thereby forging new pathways in the brain. Named *Most Valuable Product* in 2008 by *Therapy Times*, the *SaeboFlex* and

SaeboReach are now offered as treatment options at over 1,500 clinics and hospitals nationwide, including 22 of the "Top 25 Rehabilitation Hospitals" as ranked by *U.S. News & World Report*. Most Saebo products are eligible for reimbursement by Medicare and most commercial insurers. With a network of over 3,400 trained clinicians spanning four continents, Saebo is committed to helping stroke survivors around the globe achieve a new level of independence.
