SaeboGlove | Clinical & Measurement Guidelines

1. Clinical Appropriateness

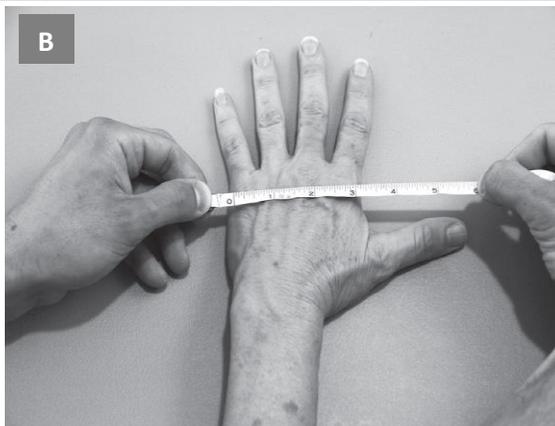

Indication for Use:	Contraindications:
<ol style="list-style-type: none">1. Neurological conditions including but not limited to stroke, brain injury, spinal cord injury, MS, GBS, ALS, and muscular dystrophy.2. Brachial plexus injury3. Radial nerve injury4. Individuals exhibiting wrist drop and/or lacking finger extension.	<ol style="list-style-type: none">1. Not for use with clients exhibiting increased tone/spasticity.2. Not for use with severe contractures or joint deformities in the fingers.3. Not for use over open wounds and infected areas.4. Not for use with severe edema.

2. How to Measure

To maximize comfort and fit, there are (4) measurements required. The four measurements will indicate the best possible size recommendation. Your measurements will be assessed by a Saebo representative who will determine the appropriate recommended size. If your in-between sizes we recommend sizing up to the larger size.

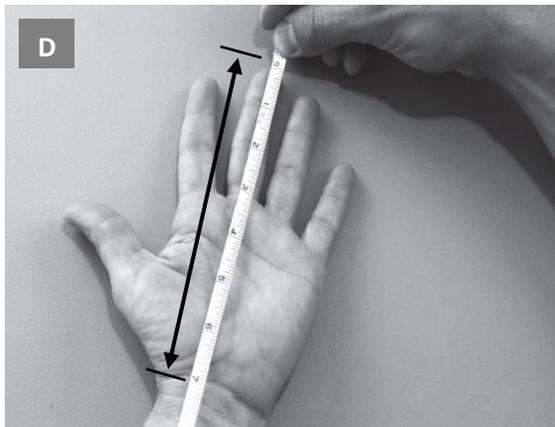

(A) Wrist Circumference: measure around wrist just below wrist bone

(B) Hand Width: measure dorsal hand width just below knuckles of your pointer and pinky fingers (do not wrap tape down side of hand); use a straight ruler if possible

(C) Hand Circumference: measure around the hand, just below the knuckles

(D) 3rd Finger Length: measure from the tip of the middle finger down to the edge of palm

Insert measurements in the [Device](#) Section on the first page.
